

A black and white architectural drawing of a cable-stayed bridge is the background. In the foreground, a black pen is positioned diagonally, pointing towards the drawing. The drawing shows the intricate steel structure of the bridge, including the main tower and the cables. A red rectangular box is overlaid on the right side of the image, containing white text.

The Good Practice Guide Series from RIBA Publishing

NEW

Good Practice Guide: Inspecting Works Nicholas Jamieson

Good Practice Guide: Inspecting Works thoroughly explores all the issues associated with inspecting the works on site, in particular the architect's contractual obligations to inspect under the RIBA Appointment Documents and the building contract. It also looks at the practice management issues connected with inspection duties, including planning, the role of the clerk of works, team briefing, inspection checklists, defects, health and safety, progress monitoring, security and completion.

A section on practical matters such as clothing, etiquette and dealing with intimidation is followed finally with an in depth look at the likely inspection watch points associated with all the different building elements from demolition to internal finishes.

Practice Management

Architect's Job Book, Eighth Edition 3DReid

The Architect's Job Book is the Royal Institute of British Architects' long-established and recognised standard reference work for running architectural jobs and administering construction contracts. This new edition has been completely updated to reflect current practice and substantially reformatted to make it easier to use for today's practising architect. The book examines the architect's key obligations and actions to be undertaken at every work stage set out as a series of checklists.

Green Guide to the Architect's Job Book, Second Edition Sandy Halliday

The Green Guide to the Architect's Job Book is a highly readable process map through the complexities of design and construction to aid the successful delivery of long-term sustainability in our built environment. Totally up-to-date and compatible with the Architect's Job Book, the Green Guide to the Architect's Job Book nonetheless stands alone as a straightforward, practical aide-memoire based on hard-won experience in the real world for architects and, importantly, project managers and clients, many of whom are actively seeking sustainable buildings.

Plan of Work: Multi-Disciplinary Services Roland Phillips

Plan of Work: Multi-Disciplinary Services is the new edition of the guide to the RIBA Outline Plan of Work 2007, the de facto standard project framework used by the construction industry. Now updated to reflect current procurement practice and the consequences of better risk management, this guide describes how the different parties in the contemporary multi-disciplinary team can work together effectively to complete work stages. In updating this new edition to suit contemporary building procurement routes, Plan of Work: Multi-Disciplinary Services provides a flexible model for preparing designs with a cost plan and is an invaluable roadmap for monitoring their construction.

The Architect in Practice, Ninth Edition David Chappell and Andrew Willis

This classic text has long provided the student of architecture and the practitioner with a readable guide to the profession, outlining an architect's duties to client and contractor, the key aspects of running a building contract, and the essentials of management, finance and drawing office procedure. Revisions in this new edition include new planning and building regulation requirements, the latest RIBA Code of Conduct and form of architects' appointment, new legislation on limited liability partnerships, the 2005 JCT standard forms of contract, and adjudication.

Architectural Management: International Research & Practice
Edited by Stephen Emmitt, Matthijs Prins and Ad den Otter

Architectural Management looks back at over a decade of research into architectural management, considers the present challenges and opportunities, and also looks to the future. It provides a review of earlier work and developments as well as setting the theme for new research areas. The book divides into six sections representing topical themes, each section containing two research-based chapters and one practical case study. Case studies are from six European countries – Belgium, Denmark, Finland, The Netherlands, Norway and the UK. Architectural Management represents the state of the art of architectural management research and practice and includes contributions from leading international figures in the field.

Architect's Handbook of Practice Management, Seventh Edition
Sarah Lupton

The highly respected and authoritative Architect's Handbook of Practice Management, the professional's business bible, has been designed, reorganised and revised to bring it entirely up to date. Much of the handbook's detail has been updated to reflect changes in legislation, case law and best practice. Additionally it now features new sections on staff appraisals, limited liability partnerships, stakeholder pensions, partnering, after the event insurance, copyright and the new ARB code.

Construction Contracts: Questions and Answers David Chappell

In this book, David Chappell answers architects' and builders' common construction contract questions from his extensive experience as a specialist in construction law. Questions range in content and cover: extensions of time; liquidated damages; loss and or expense; practical completion; defects; valuation; certificates and payment; architects' instructions; adjudication and fees. In answering genuine questions on construction contracts, specialist consultant David Chappell has created an invaluable resource.

Liquidated Damages and Extensions of Time In Construction Contracts, Third Edition Brian Eggleston

This book clarifies, in a highly readable but legally rigorous way, the many misunderstandings on time and damages which abound in the construction industry. This third edition takes account of a large volume of new case law since the previous edition was published over ten years ago. The book includes a new chapter on delay analysis and expanded chapters on penalty clauses, the effects of conditions precedent and time-bars, and the complexities of causation.

Evaluating Contract Claims, Second Edition
R. Peter Davison and John Mullen

Thoroughly updated, reflecting pertinent court decisions on damages and the duty to mitigate, this new edition covers new provisions of the revised JCT 2005 contracts and the 2005 New Engineering Contract. There is substantial additional material on issues arising from time and delay analysis and the financial consequences of changes to time – issues that regularly cause real problems in the evaluation of quantum for construction claims. This book concentrates on the quantification of claims after liability has been established, regardless of the form of contract used, and sets out the principles and methods that should be reflected in the evaluation of claim quantum and the standard of substantiation required.

Space Craft: Developments in Architectural Computing
 David Littlefield

Space Craft is a snapshot of the rapidly developing subject of architectural 3-D computer modelling. Packed with cutting-edge case studies by acknowledged leaders in the field, the book explores the contemporary state of the art and hints at its monumental potential, a potential that is within reach of very small practices – even sole practitioners. The case studies within the book, many of them of recent, well-known buildings, include explanations of how the visualisations and structures were created.

Building Structures Illustrated: Patterns, Systems and Design
 Francis D. K. Ching

Taking a new approach to structural design, Ching and his co-authors show how the structural systems of a building – as an integrated assembly of elements with pattern, proportions and scale – are related to the essential aspects of architectural design: formal and spatial composition, program fit, coordination with other building systems such as enclosure and mechanical systems, code compliance, etc. **Building Structures Illustrated** enables you to gain a new understanding of structural principles and planning, without the need for mathematics. The book is illustrated throughout with line drawings to present the essential presence of structural systems in buildings.

Architect's Sketches: Dialogue and Design
 Kendra Schank Smith

Concepts from architects' minds evolve through sketches and as a mode of transference are conveyed to the finished building. This book compares qualities of sketches to reveal various approaches to the instruments of thinking. It provides insight into the relationship between architectural sketches and the process of creative manipulation.
