# Learning from building failures

**Thursday 25 March 2010**  
**Holiday Inn, Wrotham, Kent**

Every building professional needs to have a thorough understanding of building defects. This seminar will examine defect diagnosis through analysis of a wide range of building failures. There will be ample opportunity to obtain answers to your specific buildings defects questions.

**You will cover:**

**Diagnosing the cause:**

- what the problem was
- what happened and why
- how you establish the cause
- what remedies were appropriate, to determine the level of loss

**Building pathology**

- disease spread in buildings
- death due to building collapse
- water seepage and consequent damage

**Claim analysis – the investigation of claim circumstances**

**Diagnostic aids**

- decisions trees, fault trees and similar approaches – do they work?  
If so, when?

**Professor Malcolm Hollis** is a Chartered Surveyor and Building Pathologist. He is Professor of Building Pathology at the Henley Business School at the University of Reading, specialising in the diagnosis of failures within buildings. He has given evidence on around 100 occasions in seven different countries. He is the author of books on building failures and an executive member of the Academy of Experts.
