Trees and Ecology

**Thursday 18 February 2010
Haywards Heath**

So there's an unusual tree or a protected species on your proposed site. Does this matter? Will it take you and your client a lot of time to sort out?

At this seminar, two specialists from Landscape Planning Ltd will take you through the hoops through which you must jump, with plenty of case studies. You will learn about:

Trees & Development:

- the planning context
- Arboricultural Impact Assessments and Method Statements
- the importance of BS 5837: 2005
- examples of trees and site layouts; and building in, around and over root zones

Ecology & Development:

- relevant legislation and policy guidance
- protected species
- extended Phase 1 Habitat Surveys

Speakers:

Oisín Kelly has worked in arboriculture since 1991. He is Technical Director, Arboricultural Consultant and Expert Witness for Landscape Planning Ltd and has particular expertise in tree preservation orders. He is an experienced lecturer, presenting to organisations including the National Association of Tree Officers and the RICS

Peter Harris specialises in tree hazard; nature conservation and habitat creation; and Environmental Impact Assessment practice and procedure. He has considerable practical experience of Phase 1 ecological surveys relating to the impact on trees of demolition and construction. Peter is a Senior Consultant on Arboriculture and Energy at Landscape Planning Ltd

Booking Form
