

Core Event 9 – Sustainable Design and Construction - tackling the existing building stock

Tuesday 22 September 2009 - Wakefield

Practicing sustainable construction should be a fundamental skill of the architect and there needs to be a higher priority given to improvement of the existing commercial and residential building stock.

This seminar will highlight the implications of sustainable issues on design and construction, keep you abreast of new developments and bring you up to date with new and up-and-coming legislation. It also looks in some detail at issues relating to development and refurbishment of existing buildings.

The session will commence with a short overview of current global problems and in particular show how they relate to the construction industry. A more in-depth review of the following issues will then be presented:

- Relevant legislation
- Efficient water management; rainwater harvesting & greywater recycling
- Lifecycle analysis – from cradle to cradle
- Recycling and designing out waste
- Low carbon technologies
- Case studies reviewing the application and implication of sustainable construction techniques

There will also be ample opportunity to get answers to your specific sustainability questions.

The seminar gives you three hours of general awareness and detailed knowledge CPD under the 'Professional Context – Sustainable Architecture' section of the RIBA Core Curriculum.

Speaker: Lucy Pedler BA, Dip.Arch, ARB, RSA

Lucy is an architect with 25 years professional experience and sustainable expertise in the UK and the USA. She was a product specialist for five years at Construction Resources ecological building centre researching products and advising architects. Lucy now runs her own sustainable architecture practice, archipeleco architects, designing low impact buildings and founded The Green Register of Construction Professionals in 2000.
