

RIBA Advanced Conservation Course

Do you have a passion for conservation architecture? Have you already attended the RIBA four day conservation course or have a conservation qualification? Are you interested in developing your conservation and adaptation knowledge and skills further?

RIBA Advanced Conservation Course 2018

The RIBA Advanced Conservation Course is an important step in developing your specialism in conservation.

The RIBA Conservation Accreditation Scheme is based on progressing through three levels from Conservation Registrant, implying awareness of the subject, to the formal accreditation levels of Conservation Architect and finally Specialist Conservation Architect demonstrating expertise. The purpose of the two day course is to support this progression by focusing on the conservation process and elements and materials not covered in the

introductory four day course. The modules are based once again on the internationally recognised ICOMOS Guidelines for Education and Training.

Attending the course will help you develop critical awareness and knowledge of architectural conservation procedures in order to apply theory in practice, as well as detailed analysis of structure, construction and services during the Technical Design stage.

RIBA Advanced Conservation Course 2018

Who is the course for?

The course is relevant to practising architects with a varying prior knowledge and experience in the field of conservation, including those who have completed the four-day RIBA Conservation Course or other conservation courses, those who are accredited as CA or SCA or are at an equivalent level, who may simply want a refresher. The course is aimed at architects and other built environment professionals who:

- wish to progress their knowledge in conservation architecture
- want to further their practical knowledge and skills in conservation
- wish to refresh their knowledge or formalise learning from experience in the field
- need to build up a portfolio of evidence to support applications to RIBA and other conservation accreditation schemes.

By attending this course, you will be encouraged to enter into debate, share your experience and views, become more inquisitive and reflective and discuss emerging theory, research, techniques and legislation.

Course content and structure

The course's emphasis is conservation in practice, presenting fresh and diverse projects and case studies that showcase the work of small and emerging practices and larger well established practices to demonstrate the full range of core skills needed by conservation architects including the growing importance of the conservation of C20th buildings.

Day 1 Conservation in practice (Module 5)

- Fee bid group exercise and discussion
- Specifying repair techniques
- Retrofit and thermal upgrade
- The science of conservation
- Specification group exercise and discussion

Day 2 Structure, Construction & Services (Module 6)

- Intangible Significance discussion
- Material conservation case studies
- Conservation of C20th buildings
- Guest speakers will vary in various locations and will include talks on damp, glass, timber frame repair, paint conservation and access consultancy.

** RIBA Advanced CPD refers to specialisms or demonstrable expertise which an architect could use to market to clients or employers, as career development, or to be named on a specialist list.*

Outcomes

This course builds on the four-day RIBA Conservation Course and develops a more technical content, to expand on the experience and skills that are required to work as a conservation architect. Following the course, you will be able to:

Conservation Procedures

- apply the underlying principles of modern conservation, including ICOMOS Charters, UNESCO Conventions and national policy guidance
- construct a logical project plan
- make balanced and responsible judgements based on international charters and guidelines, current good practice and national and standards
- generate proposals and make ethical and informed decisions for the building's conservation.

Structure Construction and Services

- understand how functional requirements can be incorporated into the design proposals
- integrate this knowledge into the physical evaluation of the building and the causes of decay
- carry out detailed Technical Design on projects
- recognise the symbiotic relationship between building conservation and environmental sustainability
- develop key practical knowledge and skills in the practice of conservation architecture
- support your application onto the RIBA and other Conservation Registers
- gain 10 hours of RIBA Advanced Accredited CPD*

Course leader

Janie Price is an RIBA Accredited Specialist Conservation Architect with over 25 years' experience. Janie joined Kennedy O'Callaghan Architects as a partner in 1999. She organized a lecture series focused on multi-disciplinary work in the heritage cultural sector as the senior lecturer at University of East London. Her work includes conservation architect for Bletchley Park and the Antarctic Heritage Trust. She is experienced in a wide variety of conservation work at all work stages, from medieval farmhouses to palaces and design guidance in conservation areas. She was co-speaker on the RIBA Conservation Course in 2017 and is an assessor for the conservation register for the RIBA and CARE.

Days 1 and 2 will be delivered by Janie and a co-speaker. Speakers may vary from course to course to suit availability and location, however, the course content will remain consistent. Andrew Shepherd, from Andrew Shepherd will be delivering some content during this course.
